Product range overview and type codes

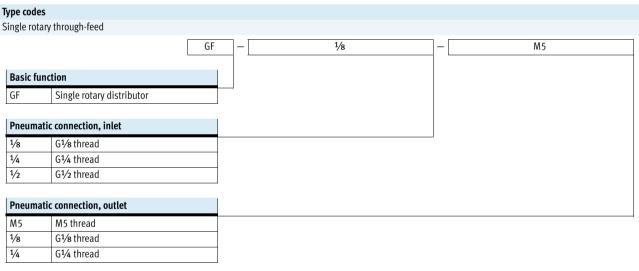

General

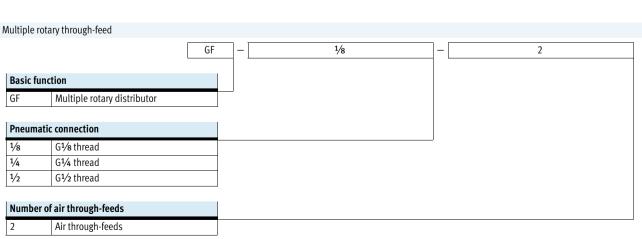

The rotary distributors GF with single or multiple rotary through-feed transmit media from stationary sources to rotating machine parts.

The compact and sturdy design with double bearing makes the rotary distributors a reliable means of protecting your media supply against mechanical loads.
In the case of the rotary distributors
with multiple rotary through-feed, the

medium can be flexibly supplied and returned through the radial and axial inlets and outlets.

Operating and environmental conditions							
Operating pressure for entire [bar]	-0.95 +10						
temperature range							
Operating medium	Compressed air according to ISO 8573-1:2010 [7:-:-]						
Note on operating/pilot medium	Lubricated operation possible						
Ambient temperature [°C]	-10 +80						
Corrosion resistance class CRC ¹⁾	1						

1) Corrosion resistance class CRC 1 to Festo standard FN 940070 Low corrosion stress. For dry indoor applications or transport and storage protection. Also applies to parts behind covers, in the non-visible interior area, and parts which are covered in the application (e.g. drive

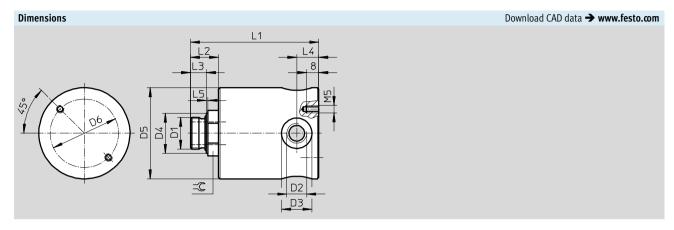

Note

When using speeds above 1,000 rpm, only lubricated compressed air should be used. If no lubricated compressed air is available, the depot lubrication system must be replaced every 300 operating hours.
