Note 2) □ in part numbers for a round pressure gauge indicates a type of connection thread. No indication is necessary for R; however, indicate N for NPT. Contact P/A regarding the connection thread NPT and supply of the pressure gauge for PSI unit specifications.

Note 3) For 1MPa.

Note 4) Includes one O-ring and 2 mounting screws.

Note 5) Minimum operating pressure: N.O. type-0.1MPa; N.C. type-0.1MPa (AD17/27) and 0.15MPa (AD37/47). Contact P/A regarding the specifications for PSI unit and "F".

Note 6) When "N" is specified in the end of part number of auto drain, applicable tube O.D should be ø3/8".

⚠ Specific Product Precautions

Be sure to read before handling. Refer to pages 75 through 78 for safety instructions and F.R.L. unit precautions.

Selection

⚠ Warning

- Residual pressure release (outlet pressure release) is not completed by releasing inlet pressure. To release residual pressure, use a filter regulator with a back flow mechanism.

Maintenance

⚠ Warning

- Replace the element every 2 years or when the pressure drop becomes 0.1MPa, whichever comes first, to prevent damage to the element.

Mounting & Adjustment

⚠ Warning

- Set the regulator while checking the displayed values of the inlet and outlet pressure gauges. Turning the knob excessively can cause damage to the internal parts.
- The pressure gauge indicated with regulators for 0.02 to 0.2MPa setting is for 0.2MPa use only. Exceeding 0.2MPa of pressure can damage the gauge.
- Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

⚠ Caution

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.

- Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark" will disappear).

- A knob cover is available to prevent careless operation of the knob. Refer to Features 1 for details.

⚠ Specific Product Precautions

Be sure to read before handling.
Refer to pages 75 through 78 for safety instructions and F.R.L. unit precautions.

Mounting & Adjustment

⚠ Warning

1. Set the regulator while checking the displayed values of the inlet and outlet pressure gauges. Turning the knob excessively can cause damage to the internal parts.
2. The pressure gauge included with regulators for 0.02 to 0.2MPa setting is for up to 0.2MPa use. Exceeding 0.2MPa of pressure can damage the gauge.
3. Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

⚠ Caution

1. Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure.
Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.
- Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
 - Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).

2. A knob cover is available to prevent careless operation of the knob. Refer to Features 1 for details.

Maintenance

⚠ Warning

1. Replace the element every 2 years or when the pressure drop becomes 0.1MPa, whichever comes first to prevent damage to the element.

AW20K/30K/40K

Operating Principle

When the inlet pressure (P_1) is higher than the set pressure, the check valve ② closes and operates as a normal regulator (Figure 1).

When the inlet pressure (P_1) is shut off and released, the check valve ②, opens and the pressure in the diaphragm chamber ① is released into the inlet side (Figure 2).

This lowers the pressure in the diaphragm chamber ①, and the force generated by pressure regulator spring ③ lifts the diaphragm. Valve ④ opens through the stem, and the outlet pressure is released to the inlet side (Figure 3).

Note 4) Minimum operating pressure: N.O. type-0.1MPa; N.C. type-0.1MPa (AD27) and 0.15MPa (AD37/47). Set the pressure to allow a pressure drop when the fluid flows. Contact P/A regarding the specifications for PSI unit and "F".

⚠ Specific Product Precautions

Be sure to read before handling. Refer to pages 75 through 78 for safety instructions and F.R.L. unit precautions.

Selection

⚠ Warning

- Residual pressure release (outlet pressure release) is not complete by releasing inlet pressure. Contact P/A regarding residual pressure release.

Air Supply

⚠ Caution

- Install an air filter (Series AF) as a preliminary filter on the inlet side of the mist separator regulator to prevent premature clogging.

Maintenance

⚠ Warning

- Replace the element every 2 years or when the pressure drop becomes 0.1MPa, whichever comes first, to prevent damage to the element.

Mounting & Adjustment

⚠ Warning

- Set the regulator while checking the displayed values of the inlet and outlet pressure gauges. Turning the knob excessively can cause damage to the internal parts.
- The pressure gauge included with mist separator regulators for 0.05 to 0.2MPa setting is for up to 0.2MPa only. Exceeding 0.2MPa of pressure can damage the gauge.
- Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

⚠ Caution

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.

- Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark" i.e., the gap, will disappear).

- A knob cover is available to prevent careless operation of the knob. Refer to Features 1 for details.

Standard specifications

Model	AWD20	AWD30	AWD40
Port sizes	1/8, 1/4	1/4, 3/8	1/4, 3/8, 1/2
Fluid	Air		
Proof pressure	1.5MPa		
Maximum operating pressure	1.0MPa		
Set pressure range	0.05 to 0.85MPa		
Pressure gauge port size ^{Note 1)}	Rc, NPT, G 1/8	Rc, NPT, G 1/8	Rc, NPT, G 1/4
Ambient and fluid temperature	-5 to 60°C (with no freezing)		
Nominal filtration rating	0.01µm (95% filtered particle size)		
Outlet side oil mist concentration	Max. 0.1mg/m ³ (ANR) ^{Note 2) Note 3)} (before saturated with hydraulic fluid: 0.01mg/m ³ (ANR) or less, approx. 0.008ppm)		
Rated flow L/min (ANR) ^{Note 4)}	90	180	450
Bowl material	Polycarbonate		
Bowl guard	Option	Standard	
Drain capacity (cm ³)	8	25	45
Construction	Relieving type		
Weight (kg)	0.44	0.59	1.25

Note 1) Pressure gauge connection threads are not required for the regulator with a square embedded type pressure gauge (AWD20 to 40).

Note 2) When the compressor oil mist discharge concentration is 30mg/m³ (ANR).

Note 3) Bowl O-ring and other O-rings are slightly lubricated.

Note 4) When the outlet pressure is 0.5MPa. (The rated flow varies depending on the set pressure.)
Keep the air flow within the rated flow to prevent an outflow of lubricant to the outlet side.

Accessory part no.

Note 1) Assembly includes a bracket and set nuts.

Note 2) □ in part numbers for a round pressure gauge indicates a type of connection thread. No indication is necessary for R; however, indicate N for NPT. Contact P/A regarding the NPT connection thread and pressure gauge supply for PSI unit specifications.

Note 3) Includes one O-ring and 2 mounting screws.

Note 4) Minimum operating pressure: N.O. type-0.1MPa; N.C. type-0.1MPa (AD27) and 0.15MPa (AD37/47). Set the pressure to allow a pressure drop when the fluid flows. Contact P/A regarding the specifications for PSI unit and "F".

Note 5) When "N" is specified in the end of part number of auto drain, applicable tube O.D should be ø3/8".

⚠ Specific Product Precautions

Be sure to read before handling. Refer to pages 75 through 78 for safety instructions, F.R.L. unit precautions.

Selection

⚠ Warning

- Residual pressure release (outlet pressure release) is not complete by releasing inlet pressure. Contact P/A regarding the residual pressure release.

Air Supply

⚠ Caution

- Install an air filter (Series AFM) as a preliminary filter on the inlet side of the micro-mist separator to prevent premature clogging.

Maintenance

⚠ Warning

- Replace the element every 2 years or when the pressure drop becomes 0.1MPa, whichever comes first, to prevent damage to the element.

Mounting & Adjustment

⚠ Warning

- Set the regulator while checking the displayed values of the inlet and outlet pressure gauges. Turning the knob excessively can cause damage to the internal parts.
- The pressure gauge included with micro-mist separator regulator for 0.05 to 0.2MPa setting is for up to 0.2MPa only. Exceeding 0.2MPa of pressure can damage the gauge.
- Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

⚠ Caution

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure.
Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.

- Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark" will disappear).

- A knob cover is available to prevent careless operation of the knob. Refer to Features 1 for details.
